DETAILED ACTION

1. Applicant's arguments, see Remarks, filed 2/6/04, with respect to claims 1-13 have been fully considered and are persuasive. The Advisory action of 3/24/04 has been withdrawn.

Allowable Subject Matter

2. Claims 3-6,9-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Prior art fails to show a laser beam diameter adjusting means comprising: a piezoelectric/ electrostrictive film type element comprising a substrate, a piezoelectric/electrostrictive operating section integrated onto the substrate and a reflective surface associated with the piezoelectric/electrostrictive film type element, a first electrode arranged on the operating sheet and second electrode arrange on the piezoelectric/electrostrictive layer. Wherein, the substrate of the piezoelectric/electrostrictive film element has a relatively thin and flexible sheet section and a peripheral section surrounding the sheet section, the peripheral section being relatively rigid and thicker than the sheet section, and the piezoelectric/ electrostrictive operating section is arrange on the sheet section of the substrate.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2,7-8 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishikawa(4733064)

Ishikawa shows a apparatus for outputting a laser beam comprising: a laser beam source (2), a laser beam diameter adjusting means (9), a laser beam reflecting direction controlling means (11) and a recording means (10). Ishikawa also discloses an alternative embodiment of (fig.1) wherein the variable shape mirror comprising a piezoelectric bimorph having deformable surface (col. 5 line 40 –44)

Ishikawa also discloses a first optical system (2,9) arrange in an optical path between the laser beam source and laser beam adjustment means and a second optical system (6,7) arrange in an optical path between the laser reflecting direction controlling means and the recording means.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 703-306-5855. The examiner can normally be reached on 8:00 to 4:30.
